ABSTRACT

This publication presents summary data on participants in programs operated under Title IIA or Title III of the Job Training Partnership Act (JTPA) during the first 6 complete program years of their operation. Data are from the Job Training Quarterly Survey. The data describe socioeconomic characteristics of the terminees, some information on public benefits received at program entry, and brief work histories. Other data detail length of stay in the program, activities/services received while in the program, and reasons for termination. For those terminees placed in employment, wages and hours are available. A brief narrative section describes a number of the more noteworthy trends: a gradual increase in the proportion of females over the 6-year period; a longer length of stay in Title IIA programs; proportionally more Title IIA youth under age 19; and fewer high school graduates entering Title IIA programs. Part 2 contains tables 1-83 and covers Title IIA terminees. Part 3 contains tables 84-107 and relates to terminees from Title III. The tables provide distributions of terminees by selected characteristics and selected descriptors of the program and status at termination (outcomes). The selected characteristics are primarily demographic (age, race, sex, education) but also include selected measures of economic needs. The program outcome characteristics are program activity, length of stay in JTPA, rates of placement in jobs, and wage at placement. Data are provided for various sets of major subgroups. (YLB)

PART 1

TERMINEE TRENDS

SELECTED HIGHLIGHTS

Introduction

This publication presents summary data on participants in programs operated under Title IIA or Title III of the Job Training Partnership Act (JTPA). Included here are individuals who terminated during the first six complete program years of operation. The data are longitudinal, by years, beginning with Program Year 1984 (July 1, 1984 through June 30, 1985) and continuing through Program Year 1989 (July 1, 1989 through June 30, 1990).

Data are from the Job Training Quarterly Survey (JTQS) and represent national estimates based on administrative data gathered on a sample of terminees selected quarterly over the six-year period. The data describe the socioeconomic characteristics of the terminees including eligibility information, some information on public benefits received at program entry, and brief work histories. In addition, data on length of stay in the program, activities/services received while in the program and reasons for termination are included. Finally, for those terminees placed in employment, wages and hours are available.

The purpose of this report is to consider selected characteristics and outcomes of Title IIA and III terminees over a number of years in order to discern whether notable changes or trends have occurred in the composition of JTPA participants or programs offered. Although all of these data have appeared in earlier JTQS reports, this volume brings the several years together in a single tabular form for each of several subgroups. This makes comparison of data between and over program years easier.

The tables which comprise the greatest part of this volume, provide distributions of terminees by selected characteristics and selected descriptors of the program and status at termination (outcomes). The selected characteristics are primarily demographics (age, race, sex, education), but also include selected measures of economic need. The program outcome characteristics are program activity, length of stay in JTPA, rates of placement in jobs and wage at placement. The data are provided for various sets of major subgroups listed on the following page.

Title IIA
All Terminees
Age Group (youth, adult)
Sex (male, female)
Race/Ethnic Group (Black, White, Hispanic, Other)
Program Activity (CT-basic, CT-other, OJT, JSA, WE, Other services)[*]

Title III
All Terminees
Sex (male, female)
Race/Ethnic Group (White, non-White)
Program Activity (CT, OJT, JSA, Other)

In addition to tables on each major subgroup as indicated above, each major subgroup is crossed (or combined) with all other major subgroups in the same Title to provide a "minor subgroup" for which tables are also produced. Thus, there are tables for White females, males in CT, and so forth.

This volume is organized into three parts following this introduction. Part 1 presents selected highlights of the trends that have been identified. These are discussed briefly and illustrated graphically for selected major subgroups. The second and third parts of the report contain longitudinal tables on selected characteristics of terminees and selected JTPA program outcomes for the terminees. Part 2 contains tables 1 through 83 and covers Title IIA terminees. Part 3 contains tables 84 through 107 and relates only to terminees from Title III. There is a table for each subgroup as described earlier. Both parts 2 and 3 begin with a complete list of table titles.

---

[*] CT-basic = classroom training in basic education; CT-other = classroom training which is not basic education (mainly skills training); OJT = on-the-job training; JSA = job search assistance; WE = work experience; other services = all other.

Highlights - Title IIA

- **Sex**

The proportion of females served by JTPA Title IIA seems to have increased gradually over the six-year period. The percent of terminees who were female increased from 51 percent in PY 1984 to 55 percent in PY 1989. The annual increases were small but the net change in percent from 51 to 55 is statistically, if not programmatically, significant.

The increasing proportion of female participants was relatively consistent across the major age groups with adults showing the slightly greater overall increase. When the data by race/ethnic groups are viewed, only those classified as Hispanic do not follow this trend. The percent of Hispanic terminees who were female was estimated at 51 or 52 percent in all six years. The overall increases in percent female were relatively consistent across terminees from all JTPA program activities although year-to-year changes in percent female were occasionally small decreases. The activity with the highest proportion female (CT-other) had 62 percent terminees in PY 1984 and 67 percent in PY 1989. Although only the CT program activities had a majority of female terminees in PY 1984, as of PY 1989, this had changed. Only OJT terminees were mostly male in PY 1989. For OJT terminees, the percent female rose from 40 to 46 percent.

Changes in percent female are presented graphically in Exhibit 1.

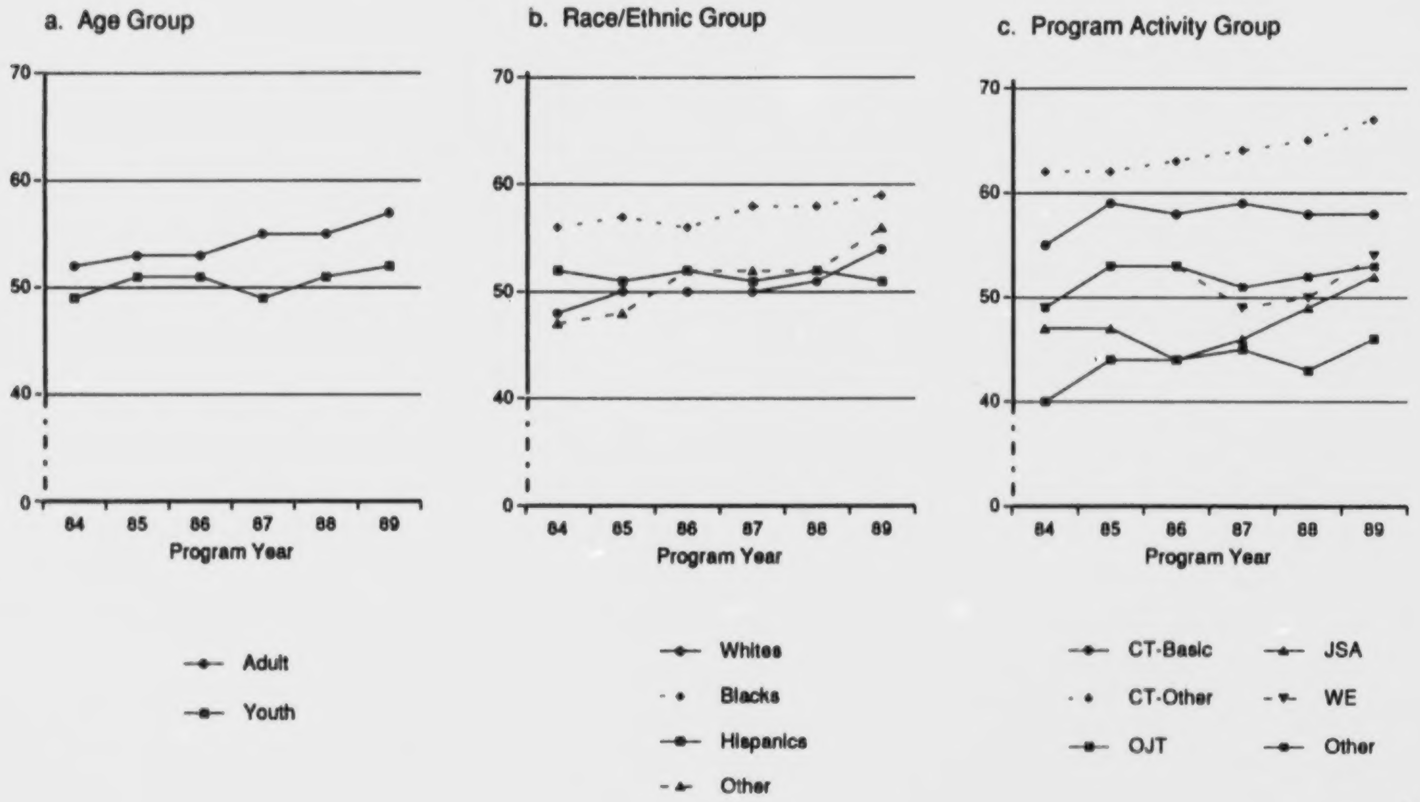
- **Age**

The distribution of Title IIA terminees by age at JTPA enrollment has changed considerably within the group who entered as youth (≤ 21 years of age). The proportion of JTPA youth who were under 19 years of age at entry was under one-half (48%) in PY 1984 and has increased every year, reaching 63 percent of all youth who terminated from Title IIA in PY 1989.

The pattern of changes in the age composition of youth terminees from JTPA was fairly consistent for males compared to females. For the different race/ethnic groups, the Whites and Hispanics had the smaller net increases of 12-14 percentage points while that of both Blacks and other race/ethnic groups increased overall by a net of 18 percent.

Exhibit 1.

Title IIA Terminees: Percent Female, by Age Group, Race/Ethnic Group and Program Activity - Program Years 1984-89



7

8

SOURCE: Tables 2, 3 and 6 through 15.

The largest net changes in the percent of youth terminees who were under 19 at entry, was observed for those who terminated after receiving either of the two components of classroom training. Although CT-basic education terminees had the largest net change (50-73) in percent of youth under 19, the other CT terminees also had a relatively large increase (37-54). Terminees from the other program activities had much smaller shifts in the proportion of youth under 19. The net increase from PY 1984 to PY 1989 for both OJT and JSA youth terminees was less than 10 points. For WE terminees, there was no apparent change over the six-year period.

Graphic illustrations of the pattern of change are provided in Exhibit 2.

- **Education**

The distribution of Title IIA terminees according to their education status at entry, over the six-year period, shows a movement toward proportionately fewer high school graduates. The corresponding percentage increases occurred primarily for students although slight increases occurred in the percent of the terminees who were school dropouts at JTPA entry.

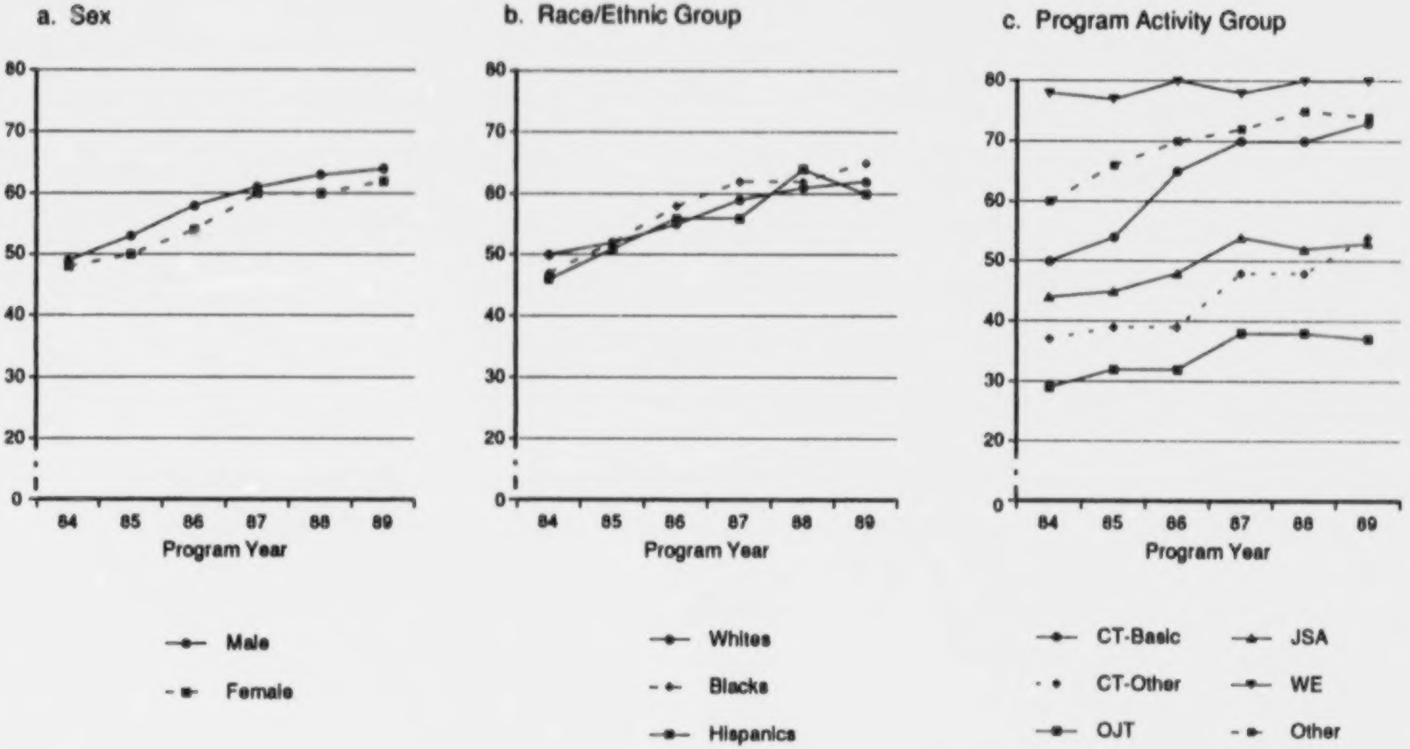
Most of the changes over time in the education status of JTPA terminees at entry would seem to be related to the increased proportions of youth who were under 19 years of age at entry. However, even among adults there was evidence of a trend toward serving a higher proportion of high school dropouts as compared to high school completers.

The largest relative change in the mix of terminees by education at entry occurred among youth. Percent of youth terminees who were high school graduates decreased fairly steadily from 43 percent in PY 1984 to 29 percent in PY 1989. The corresponding percentage increases over the period were for the percent of terminees who were students at JTPA entry. The proportion of youth who were dropouts was relatively stable over the period with no discernible trend.

The observed shift within the youth population to the enrollment of younger (under 19 years of age) individuals and a corresponding trend toward serving an increasing proportion of students within the JTPA Title IIA youth population may be explained, in part, by ETA's policy emphasis during this period on serving school-age youth. This policy thrust was reflected in the Youth 2000 campaign, initiated in 1986, and large-scale demonstration projects such as Cities in Schools.

Exhibit 2.

Title IIA Youth Terminees: Percent Under 19 Years of Age at Entry, by Sex, Race/Ethnic Group and Program Activity - Program Years 1984-89



a. Sex

b. Race/Ethnic Group

c. Program Activity Group

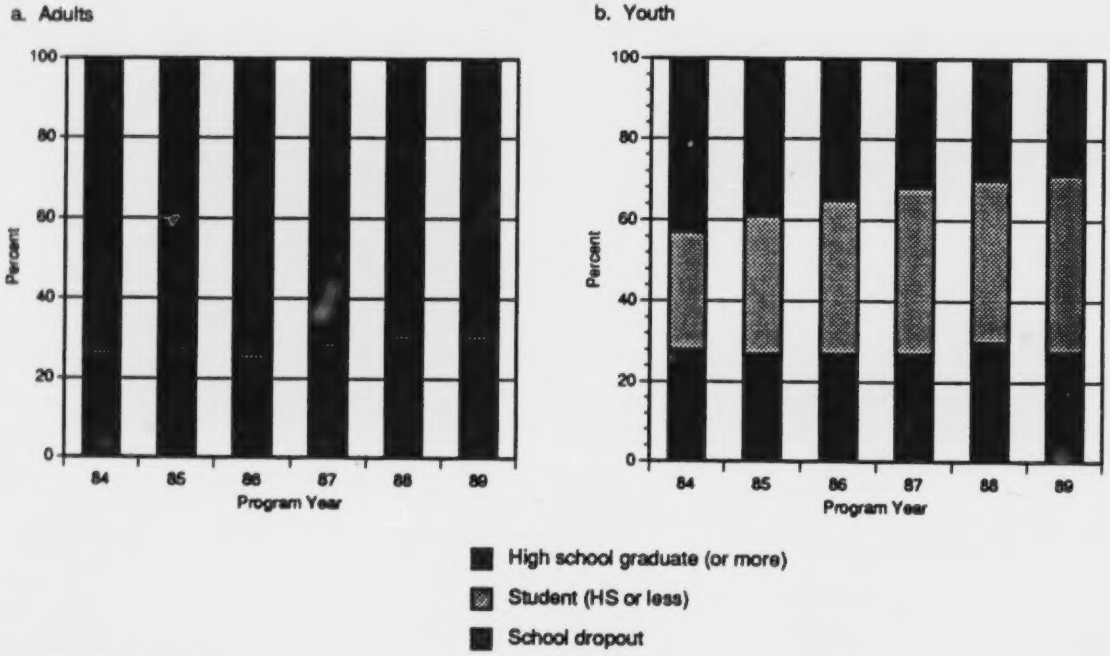
SOURCE: Tables 28 through 32 and 34 through 39

Administratively, SDAs were urged to develop year-round programs for in-school youth which eventually culminated in the legislative proposal to consolidate Titles IIA and B. The system seems to have been responsive to this policy thrust.

The proportions of terminees during each year of the six-year period, classified according to education status at entry, are visually displayed in Exhibit 3.

Exhibit 3.

Title IIA Terminees: Percent Distribution of Education Status at Entry, by Age Group
Program Years 1984-89



SOURCE: Tables 2 and 3

- **Program Activity**

The trends in age and education status at entry among youth terminees from JTPA Title IIA during the six-year period are clearly related. It is also logical to assume that increases in the proportion of youth terminees under 19 years of age and youth in school at entry would both be associated with program activity characteristics. This seems to be the case.

The trends in the percentage distributions of terminees according to program activity are generally the same for both adults and youth but somewhat more pronounced for youth. With respect to youth, the percentage of terminees who received a major identifiable program activity (CT, OJT, JSA, WE) decreased by approximately 10 percentage points over the six-year period. Terminees without an identifiable major activity include those with multiple major activities, those with only services (orientation, assessment, counseling, etc.) as well as those who received a program of services that could not be identified. Within the youth terminees the overall decrease in the percent who received a major activity was shared almost equally by all major program activities except for the basic education portion of CT. Although the total percent of youth terminees whose program activity was CT did not change much over the period, within CT there was a clear trend toward increased proportions having received CT-basic education with the corresponding decrease over the period in the proportion having had CT-other (primarily CT skills training).

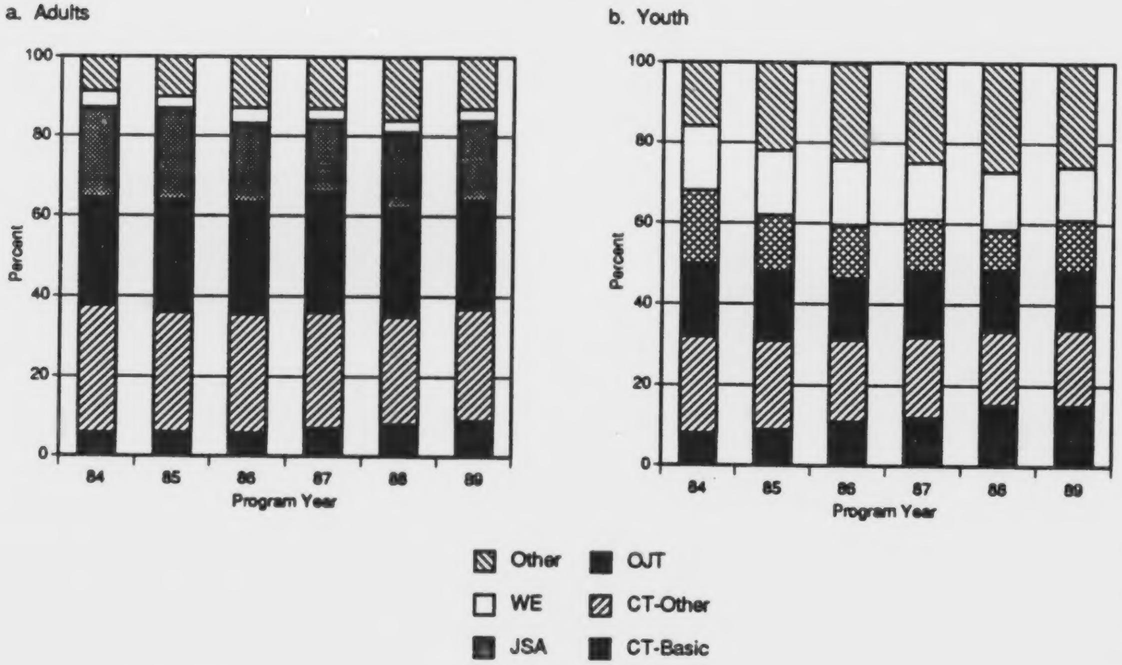
The logical association between greater proportions of in-school youth and greater emphasis on CT-basic education seems reasonable. This seems to represent the greater emphasis on aiding at-risk youth to stay in school. The increased proportions of youth without an identifiable major activity may represent a trend toward uniqueness or innovation in program structure that is difficult to classify as a major activity.

There appears to have been a shift in the focus of the basic education component of the JTPA program. While the proportion of individuals who received CT-basic as their major activity remains small, the proportion has almost doubled over the six years to 11 percent of all terminees. At the same time, the program seems to be concentrating increasingly on those most in need of basic education. The proportion of terminees who were enrolled in school at JTPA entry has increased from 12 percent to 18 percent while the proportion who were high school graduates has dropped from 61 percent to 53 percent. Consistent with this trend toward serving those with lower levels of education, the length of stay in the program for basic education classroom trainees has increased significantly over this period from 109 to 136 days. A related trend is the substantial increase -- from 12 percent to 21 percent -- in the proportion of those receiving CT-basic education who are Hispanic, a group that is likely to need more extensive English language training than the general JTPA population.

Exhibit 4 provides a graphic portrayal of the trends in program activity over the six-years of terminee data. Adult and youth terminees are charted separately.

Exhibit 4.

Title IIA Terminees: Percent Distribution by Program Activity and Age Group
Program Years 1984-89



SOURCE: Tables 2 and 3

- **Length of Stay**

The other Title IIA JTPA program characteristic with a noticeable trend over the period for youth terminees was median length of stay. Overall, the median length of stay for Title IIA terminees was estimated to be 97 days in PY 1984 and increased to 110 days by PY 1989. The year-to-year changes were generally positive (2-7 days) except for PY 1986 to PY 1987 which showed a slight decrease. However, when only terminees 21 years of age and under at entry (youth) are considered, the increasing median length of stay was much more substantial with consistently positive year-to-year increases averaging just over five days. This may well be a cause (or result) of greater proportions of youth who are younger and in school at JTPA entry.

The consideration of trends in length of stay for sex and race/ethnicity shows generally upward, but erratic, year-to-year changes. In general, females exhibit a larger overall increase in median length of stay than males and terminees in the Hispanic group had the greatest net days increase of the race/ethnic groups.

The length of stay data are presented graphically in Exhibit #5.

- **Wage at Termination**

The average hourly wage at termination for those Title IIA terminees who entered jobs, generally increased from year-to-year throughout the six-year period. This was also true, in most cases, for all major subgroups. These data are portrayed in Exhibit 6.

The data indicate a net increase of 68 cents per hour in the overall average hourly wages from PY 1984 to PY 1989. This is an increase of about 15 percent. There is little difference in the percent change in wages over the period between adult and youth terminees or between males and females. Among program activity subgroups, largest relative increased occurred for CT terminees. Those who terminated after basic education gained 18 percent in average hourly wages from PY 1984 to PY 1989 while other CT terminees, most of whom had skills training, gained an estimated 22 percent. Lowest percentage gains were shown by WE and JSA with 11 and 12 percent respectively.

During the early part of this period (PY 1984-85), the average hourly wage at termination for persons enrolled in the two basic skills training activities -- CT-other and OJT -- were quite comparable - CT-other hourly wages exceeded those of OJT by $.11, on average. During the next four years (PY 1986-89), however, the spread widened steadily with PY 1989 terminees from CT-other (i.e., skills training) averaging hourly wages of $5.88 and OJT terminees, $5.31, a differential of $.57. As noted above, classroom skills training wages at termination increased 22 percent. Over the same period comparable OJT wages increased only 13 percent. This might suggest a change in the relative quality of the jobs for which classroom skills trainees are being trained and placed as compared with OJT terminees. Detailed occupational data would be needed to determine whether this is in fact the case.

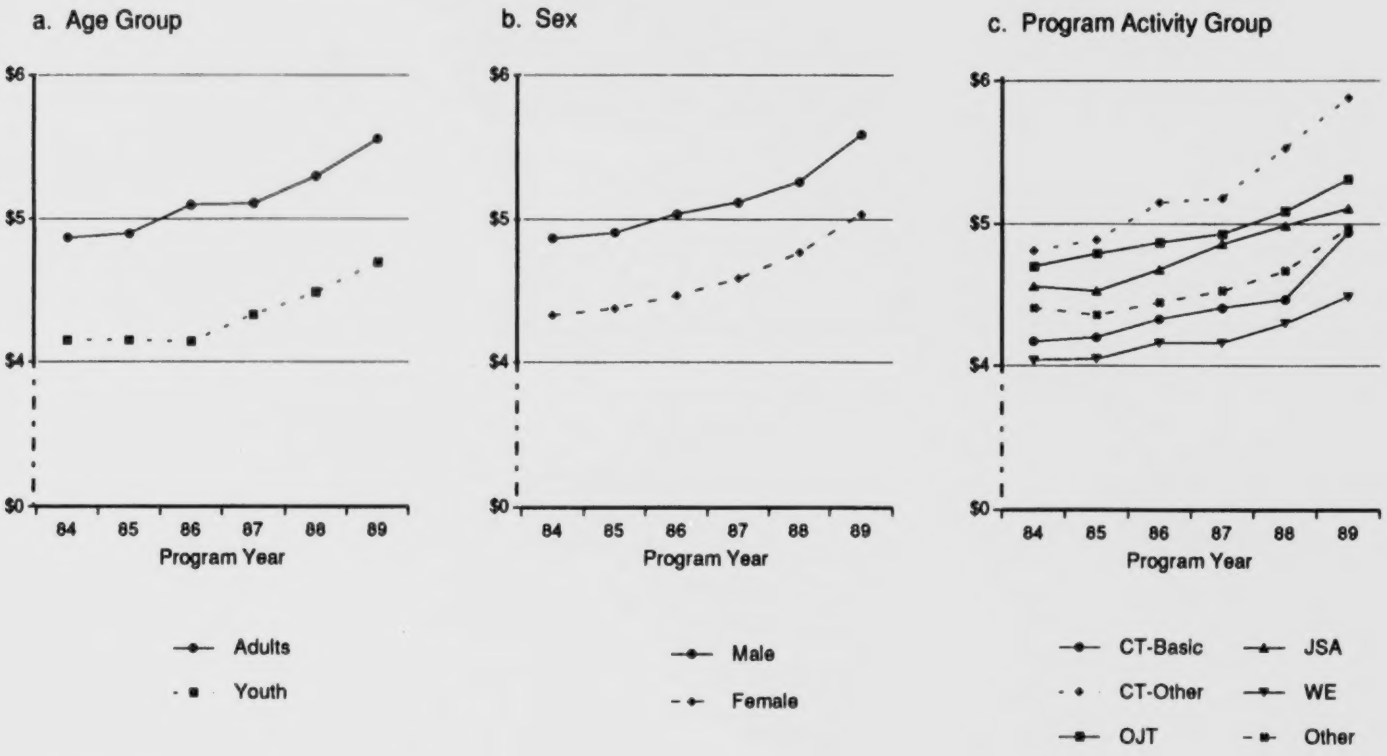
Exhibit 6.

Title IIA Terminees: Average Hourly Wage at Placement, by Age Group, Sex, and Program Activity - Program Years 1984-89



SOURCE: Tables 1, 2, 3

The relative increase in entry wage of Title IIA terminees, overall, was comparable to the increase in average wages of all production or non-supervisory non-farm workers in the U.S. over the same period. The increase of all industries combined was estimated at 17 percent. The retail trade industry, which is the industry with the lowest wage level and a frequent placement industry for JTPA terminees, shows a relative increase of 15 percent over the six-year period.

Highlights - Title III

▪ Demographics

During this six year period, there has been a noticeable narrowing in the male/female participation gap in the dislocated worker program. In PY 1984, about two-thirds of the terminees were males. By PY 1989, that proportion was reduced to 57 percent. While the trend was reversed in one year -- PY 1986 -- overall, male/female participation in the program is closer to parity. In PY 1988, the male/female ratio for the eligible displaced worker population was 65/35. It is not clear whether the higher proportion of females in the Title III program is a result of State/local administrative decisions to achieve equal representation or is attributable to other factors.

The dislocated worker program is not presently expected to target the economically disadvantaged or other special problem groups within the eligible population. However, it is worth noting that, based on the available data, the trend appears to be toward serving a more advantaged clientele under the program. In PY 1984, more than one-half of the Title III terminees were economically disadvantaged. By PY 1989, the proportion had dropped to one-third. In PY 1984, 80 percent of the terminees were high school graduates. By PY 1985, the percentage had increased to 85 percent. To anticipate possible future criticisms of "creaming" under Title III, it may be desirable to determine the extent to which these changes mirror changes in the eligible population or are due to other factors.

▪ Program Activity

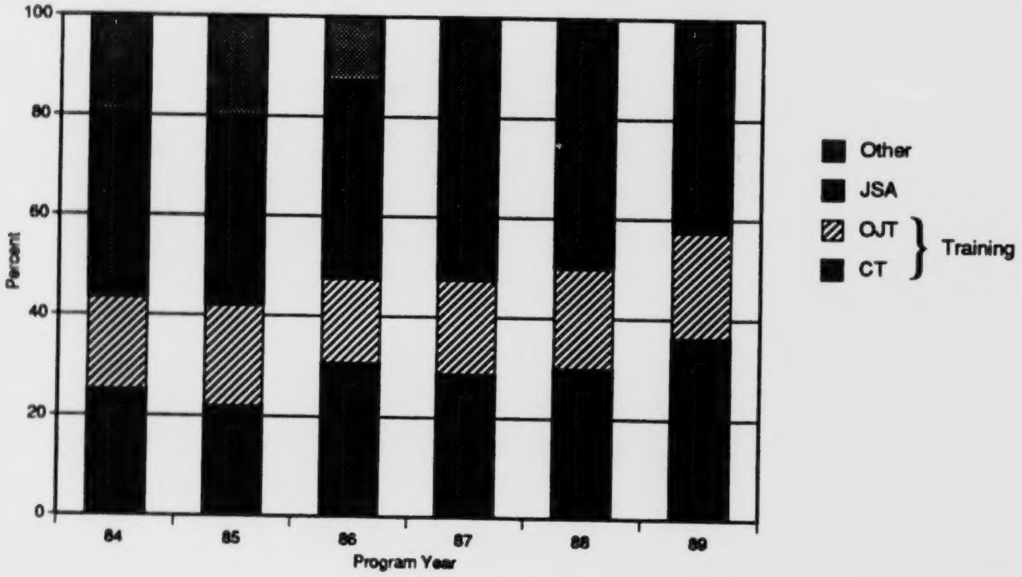
Although there have been some year-to-year declines, the overall trend in the program activities received by Title III terminees seems to be toward relatively greater numbers receiving training and fewer in non-training activities. In comparing the two (CT and OJT) training activities, the percent of terminees who received CT increased somewhat more than those who received OJT. The total increase in the percentage of terminees receiving training was from the 42 or 43 percent level in PY 1984 and 1985 to 57 percent in PY 1989. The non-training activity with the greatest portion of the relative decrease in Title III terminees was JSA. There was, however, some net decrease in the percent of terminees who received "other" services, i.e., multiple activities, services only, or a service/activity that could not be classified.

Much of the increase in the percentage of CT terminees and decrease in percentage of JSA terminees occurred from PY 1988 to PY 1989. The amended Title III (EDWAA) which placed more emphasis on training of dislocated workers was implemented in PY 1989 and may explain much of this change. However, with regard to Title III CT terminees, there was also a large percentage increase from PY 1985 to PY 1986. This relative increase was mostly offset by a counteracting percentage decrease in terminees who had received other services. No programmatic reason for this shift seems apparent.

The percentage distribution of Title III terminees by program activity is provided in Exhibit 7.

Exhibit 7.

Title III Terminees, All: Percent Distribution by Program Activity Program Years 1984-89



SOURCE: Table 84

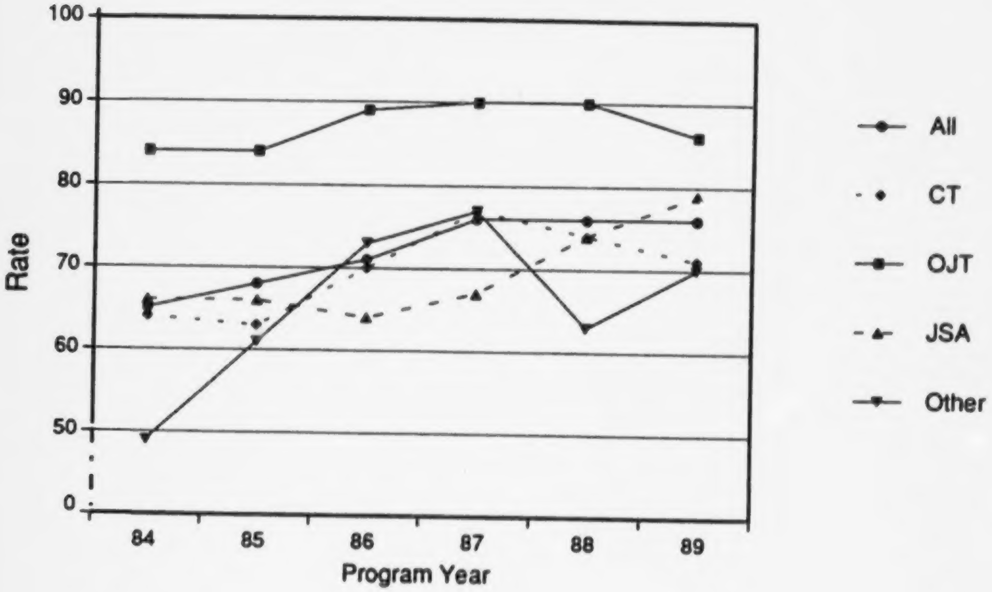
- **Entered Employment Rate**

The overall entered employment rate for Title III terminees has increased from 65 percent in PY 1984 to 76 percent in PY 1989. However, most of this increase had taken place by PY 1987. The overall rate remained steady at 76 percent during PY 1987, PY 1988 and PY 1989.

Although the entered employment rate for all Title III terminees has been steadily increasing or constant over the six-year period, the pattern of change for terminees from the various program activities has been more variable from year to year. This is illustrated in Exhibit 8.

Exhibit 8.

Title III Terminees: Entered Employment Rate, All and by Program Activity - Program Years 1984-89



SOURCE: Table 84

It is interesting to note that, during the most recent four year period (PY86 - PY89), while the percentage of Title III participants receiving JSA was steadily decreasing, an increasing proportion of the terminees from this activity were being placed in jobs at termination. This may represent a greater concentration by Title III program operators on assignment of applicants. Over the four-year period, fewer participants were receiving JSA and more were being assigned other activities, mostly training. Concomitantly, those who did receive JSA, without training, were being placed in jobs at a higher proportion or rate.

- **Wage at Termination**

Entry wages of Title III terminees who were placed in jobs during the six-year period increased by $1.41 per hour on average from PY 1984 to PY 1989. This represents 22.7 percent of the average hourly wage at entry of PY 1984 terminees. This percent gain is somewhat greater than the percentage increase (14.8) in the entry wage of Title IIA terminees over the same period and compares favorably with the increase (22.7%) in average wages of production and non-supervisory workers in all U.S. industries as reported earlier.

The average hourly wage data for Title III terminees who entered employment are presented graphically in Exhibit 9. Data are present for all terminees and by each program activity. Fairly wide variations can be observed both between years and among program activity groups. The reason for the large increase in wages from PY 1985 to PY 1986 is not clear. This represents more than half of the six-year change.
